TO: SERVICE DELIVERY AREA ADMINISTRATORS

PRIVATE INDUSTRY COUNCIL CHAIRPERSONS

JTPD PROGRAM OPERATORS

EDD JOB SERVICE OFFICE MANAGERS

JTPD STAFF

SUBJECT: TITLE II AND TITLE III PERFORMANCE STANDARDS FOR

PROGRAM YEAR (PY) 1998-99.

The purpose of this information bulletin is to provide Service Delivery Areas (SDA) with an update on the status of the Title II and Title III Performance Standards for PY 1998-99. The Department of Labor (DOL) issued Training and Employment Guidance Letter (TEGL) 12-97 on June 30, 1998, to provide states with information on the changes in the Secretary's required performance measures for PY 1998-99. On August 5, 1998, the DOL issued TEGL 12-97, Change 2, to transmit the most recent economic data and the performance standards worksheets for PY 1998-99. These TEGLs are available on the internet at http://www.ttrc.doleta.gov/common/directives/.

The Job Training Partnership Division (JTPD) is currently waiting for DOL to issue the PY 1998-99 Technical Assistance Guide to Performance Standards. The Guide contains information that is needed before we can issue the JTPA Title II and Title III Performance Standards Directives for PY 1998-99. The required information includes:

- The welfare ratio that California uses to compute the standards for two of the Title II core performance measures, the Adult Welfare Follow-up Entered Employment Rate and the Adult Welfare Follow-up Weekly Earnings.
- The extreme values for both Title II and Title III performance measures.
- The performance ranges for the Title II core measures.
- The regression models for the Title II noncore measures, Adult Entered Employment Rate, Adult Wage at Placement, Follow-up Weeks Worked, Cost per Adult Entered Employment, and Cost Per Youth Positive Termination.

As soon as this information becomes available, JTPD will issue the Title II and Title III Performance Standards Directives for PY 1998-99. The new regression models for

PY 1998-99 also include additional factors that will require some minor modifications to the Job Training Automation (JTA) system before they can be entered to run

performance standards. These changes will be completed and released prior to the second quarter reporting period.

In the interim, the attached worksheets can be used to manually calculate performance standards for the following measures:

Core Performance Measures:

- Title II Adult Follow-up Employment Rate
- Title II Adult Follow-up Weekly Earnings
- Title II Youth Positive Terminations Rate
- Title III Entered Employment Rate

Non-core Performance Measures:

- Title II Youth Employability Enhancement Rate
- Title II Youth Entered Employment Rate
- Title II Entered Employment Rate (Older Workers)
- Title II Average Wage at Placement (Older Workers)
- Title III Average Wage at Placement
- Title III Average Wage at Placement Rate at Termination

In addition to the worksheets, the economic data and general instructions for completing JTPA performance standard worksheets for Title II and Title III are attached to assist you in manually calculating performance standards.

Questions related to Title II performance measures may be directed to Betty Lai, in the Data Analysis Unit at (916) 653-1516. Questions pertaining to Title III performance measures may be directed to Karen Yuke, in the Data Analysis Unit at (916) 654-7585.

GENERAL INSTRUCTIONS FOR COMPLETING THE JTPA TITLE II PERFORMANCE STANDARDS WORKSHEETS FOR PY 1998-99

The following provides general instructions for completing the JTPA Performance Standards Worksheets including the sources of data and computation methods for the items on the worksheets.

A. <u>Service Delivery Area Name</u>

Enter the SDA name.

B. SDA Number

Enter the JTPA number assigned by the Governor to the SDA.

C. Performance Period

The performance period is preprinted.

D. Type of Standard/Date Calculated

Enter a check in the box next to the appropriate response (i.e., whether the standard is based on the SDA plan or is recalculated based on actual service levels). Enter the date on which the calculations were made.

E. Performance Measure

The name of the appropriate performance measure for which the SDA Performance Standard is being established is preprinted.

F. Column F – Local Factors

The Local Factors determined by the Secretary to have a measurable influence on SDA expected performance levels for each of the performance measures are preprinted.

G. Column G – SDA Factor Values

Enter the SDA values for each Local Factor listed in "Column F." When the worksheets are used for planning purposes, these SDA Factor Values should reflect the characteristics of the participants expected to terminate during the program year. These planning values should be obtained from the SDA. When the worksheets are used to calculate final standards, actual terminee characteristics should be substituted for the planned Factor Values.

The characteristics of the terminees must be expressed as a percent of the total number of participants who terminate during the program year and received more than objective assessment only (adult terminees for adult models, youth terminees for the youth models). SDA local economic data are provided in Attachment III.

The regression models were developed using PY 1994-95 SPIR data.

H. Column H – National Averages

The national mean data for the Local Factors shown in "Column F" are preprinted. These represent the characteristics for JTPA participants who terminated during PY 1994-95. They do not necessarily represent a desired mix of participants.

I. Column I – Differences

Subtract "Column H" from "Column G" for each Local Factor listed in "Column F" and enter the result in "Column I."

J. Column J – Weights

The appropriate Weight for each Local Factor listed in "Column F" is preprinted. These Weights indicated the estimated effect of each characteristic on the performance measure in question.

K. Column K- Effect of Local Factors on Performance Expectations

Multiply "Column I" by "Column J" for each Local Factor listed in "Column F," and enter the result in "Column K."

L. Block L – Total

Obtain the total of items listed in "Column K" by adding the positive items and subtracting the negative items. This represents the net effect of Local Factors on performance.

M. Block M – National Departure Point

The National Departure Point for each performance measure is preprinted for all measures. The departure points have been set at the 25th percentile for the entered employment measures and at the 40th percentile for earnings measures.

N. Block N – Model-Adjusted Performance Level

Add "Block L" to "Block M." Enter the result in "Block N." This figure represents the Model-Adjusted Performance Level.

O. Block O – Governor's Adjustment

The Governor may adjust the Model-Adjusted Performance Level to account for additional circumstances, to include a productivity improvement factor, or to allow for statistical impression.

Although the adjustment models produce meaningful performance standards for a large majority of SDA's, under some circumstances, the results may be unacceptably extreme. The Governor will examine individual performance expectations for the SDA's with extreme values that are considered extreme for Title II Adults, Welfare Adults and Youth.

Combine the adjustments allowed by the Governor and enter in "Block O" the total positive or negative adjustments. If no adjustment is determined to be appropriate, enter a zero in "Block O." Generally, the Governor's Adjustment applied at the

beginning of the year for planning purposes should also be applied at the end of the year to determine actual standards. However, it should be recalculated based on actual data if possible. Further, additional adjustments may be made for circumstances that vary from the beginning to the end of the year due to unanticipated circumstances that occurred during the year.

P. Block P – SDA Performance Standard

Combine "Block O" with "Block N" and enter the result in "Block P."

NOTE: The user is reminded that National Averages and Weights (preprinted in Columns "H" and "J") and the National Departure Points in "Block M" must not be changed when calculating the expected performance level to preserve the integrity of the modeling approach. Further, all Local Factors must be included when computing the Model-Adjusted Performance Level.

GENERAL INSTRUCTIONS FOR COMPLETING THE JTPA TITLE III PERFORMANCE STANDARDS WORKSHEETS FOR PY 1998-1999

The following provides general instructions for completing the JTPA Performance Standards Worksheets including the sources of data and computation methods for the items on the worksheets.

A. <u>Service Delivery Area Name</u>

Enter the SDA name.

B. SDA Number

Enter the JTPA number assigned by the Governor to the SDA.

C. Performance Period

The performance period is preprinted

D. Type of Standard/Date Calculated

Enter a check in the box next to the appropriate response (i.e., whether the standard is based on the SDA plan or is recalculated based on actual service levels). Enter the date on which the calculations were made.

E. Performance Measures

The name of the appropriate performance measure for which the SDA Performance Standard is being established is preprinted.

F. Column F - Local Factors

The Local Factors determined by the Secretary to have a measurable influence on SDA expected performance levels for each of the performance measures are preprinted.

G. Column G – SDA Factor Values

Enter the SDA values for each Local Factor listed in "Column F." When the worksheets are used for planning purposed, these SDA Factor Values should reflect the characteristics of the participants expected to terminate during the program year. These planning values should be obtained from the SDA. When the worksheets are used to calculate final standards, actual terminee characteristics should be substituted for the planned Factor Values.

The characteristics of the terminees must be expressed as a percent of the total number of participants who terminate during the program year. SDA local economic data provided in Attachment III may be used to determine the SDA Factor Values for local economic conditions.

NOTE: The definitions of the local factors are based on the Standardized Program Information Report definitions.

H. Column H – National Averages

The National Averages mean data for the Local Factors shown in "Column F" are preprinted. These represent the characteristics for JTPA terminees served in PY 1994.

I. Column I – Difference

Subtract "Column H" (National Averages) from "Column G" (SDA Factor Values) for each Local Factor listed in "Column F" and enter the result in "Column I".

J. Column J – Weights

The appropriate Weights for each Local Factor listed in "Column F" is preprinted. These Weights indicate the estimated effect of each characteristic on the performance measure in question.

K. Column K – Effect of Local Factors on Performance Expectations

Multiply "Column I" by "Column J" for each Local Factor listed in "Column F" and enter the result in "Column K".

L. Block L – Total

Obtain the total of items listed in "Column K" by adding the positive items and subtracting the negative items. This represents the net effect of Local Factors on performance.

M. Block M – National Departure Point

The National Departure Point for each performance measure is preprinted for all departure points. For the EER standard is set at the 25th percentile and the departure point for the AWP is shown at the 40th percentile. As there is no national standard for the AWP, the Governor has the discretion to set the departure point for that measure. The 40th percentile was selected to be consistent with the Title II earnings measures which also use the 40th percentile. This worksheet is provided to assist SDAs in measuring performance for Title III earnings.

N. <u>Block N – Model-Adjusted Performance Level</u>

Add the Total "Block L" to the National Departure Point "Block M." Enter the result in "Block N." This figure represents the Model-Adjusted Performance Level.

O. Block O – Governor's Adjustment

The Governor may adjust the Model-Adjusted Performance Level to account for additional circumstances, to include a productivity improvement factor, or to allow for statistical imprecision.

Although the adjustment models produce meaningful performance standards for a large majority of SDAs, under some circumstances, the results may be unacceptably extreme. Governors should examine individual performance expectations for the SDAs with extreme model-adjusted performance levels. The model-adjusted values that are considered extreme for Title III are given in Attachment 4, Tables I and II.

Combine the adjustments allowed by the Governor and enter I "Block O" the total positive or negative adjustment. If no adjustment is determined to be appropriate, enter a zero in "Block O." Generally, the Governor's Adjustment applied at the beginning of the year for planning purposes should also be applied at the end of the year to determine actual standards. However, it should be recalculated based on actual data, if possible. Further, additional adjustments may be made for circumstances that vary from the beginning to the end of the year due to unanticipated circumstances that occurred during the year.

P. Block P – SDA Performance Standard

Combine the Governor's Adjustment in "Block O " with the Model-Adjusted Performance Level in "Block N." Enter the result in "Block P."

NOTE: The user is reminded that National Averages and Weights (preprinted in Column "H" and "J") and the National Departure Points in "Block M" must not be changed when calculating the expected performance level to preserve the integrity of the modeling approach. Further, all Local Factors must be included when computing the Model-Adjusted Performance Level.
